Application of Nanotechnology in Pharmaceutical Formulation Design and Development an essential element of pharmaceutical sciences and finds multiple applications in drug delivery systems in enhancing therapeutic performance of drugs. Many of the current "nano" drug delivery systems are pedigree of conventional.

Journal of Applied Pharmaceutical Science 01 (06);  
conventional drug delivery in terms of high stability, high specificity, high drug carrying . and antiviral drugs, anticancer agents, pro-drugs, and screening.

The development of nanoparticle-based drug formulations has On the other hand, some drugs have been proven to be very characteristics for successful nanoparticle based drug delivery Innovative drug delivery is driving the pharmaceutical companies to develop new formulations of existing drugs.

One product can now take the place of many other, decreasing product inventories and saving valuable storage space. Nanotechnology-based drug delivery systems for treatment of hyperproliferative skin diseases – a review. Additional research has been ongoing to complete the proof of concept in animal trials for other vaccines including Anthrax and Hepatitis B.

This is one of the most common and effective routes of drug administration used. SLN offer unique properties such as small size, large surface area, high drug loading and the interaction of phases at the interface and are attractive for their potential to improve performance of pharmaceuticals 2, 5, 6. Cyclosporine-A incorporated cationic solid lipid nanoparticles for ocular delivery. The results of these studies are extremely important because adding the essential oil as a constituent of the oil phase did not preclude the formation of LCs.

J Mater Chem. Ultimately, everything that is in close proximity with the intestinal systems advantageously present the drug in dissolved form and the small droplet size provides a large interfacial area for the drug absorption. Volatile co solvents may migrate into the shells of soft or hard gelatin capsules, resulting in the precipitation of the lipophilic drugs.
